MHC CLASS II B LOCUS 14 (FRAGMENT)
Oreochromis niloticus (Nile tilapia) (Tilapia nilotica).
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Actinopterygii; Neopterygii; Teleostei; Euteleostei;
Acanthomorpha; Acanthopterygii; Percomorpha; Perciformes; Labroidei;
Cichlidae, Oreochromis.

MHC CLASS II B LOCUS 14 (FRAGMENT).
Oreochromis niloticus (Nile tilapia) (Tilapia nilotica).
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Actinopterygii; Neopterygii; Teleostei; Buteleostei; Neoteleostei;
Cichlidae; Oreochromis.
                                                                                                                                                                                                                                                                                                                                 "Linkage relationships and haplotype polymorphism among cichlid Mhc class II B loci.";

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from
                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying complementary peptides by analysis of protein and nucleotide sequence databases, useful in drug design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HER2/NEU DR supermotif binding peptide core sequence #13.

candipleur; (4) an isolated nucleic acid encoding a perture compitation, (5) and (5) an isolated nucleic acid encoding (11). (1) has cytostatic and immunostimulant activities, and can be used in vaccines. (1), (11) are useful for inducing cellular immune responses for the prevention and treatment of cancer. (1) and (11) are useful for monitoring or evaluating an immune response to a tumour-associated antigen when incubated with a T lymphocyte to (1) or (11). Epitope based vaccines mean that immunosuppressive epitopes that may be present in whole antigens may be avoided. Selected epitopes may be combined to enhance immunogenicity. The possible pathological side effects caused by infectious agents or whole protein antigen is eliminated. The vaccine provides the ability to direct and focus an immune response to multiple provides the ability to direct and focus an immune response to multiple selected antigens from the same pathogen. Epitope-based anti-tumour vaccines provides the opportunity to combine epitopes derived from the same pathogen. Epitope-based anti-tumour vaccines provides the opportunity to combine epitopes derived from the same pathogen. Epitope-based provides the ability to direct and focus and immune response to multiple tumour-associated molecules addressing the problem of frumour-associated molecules addressing the problem of tumour-associated molecules address

A novel composition has been developed which comprises an immunoglobulin (Ig) having an affinity constant (Ka) of at least 2 multiply 10000000000 M-1 for binding to a predetermined human antigen. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Complementarity determining region; CDR3; transgenic non-human animal; human heterologous antibody; heavy chain; light chain transgene; neutrophil efflux; reperfusion injury; CD4 binding; autoimmune reaction; inflammatory response; transplant rejection; acid induced lung injury;
                                                                                                                                                                                                                                                                                                                                                                                                                                                              of multiple isotypes by undergoing isotype switching. These animals produce a first Ig type that is necessary for antigen-stimulated B-cell maturation and can switch to encode and produce one or more subsequent
                                                                                                                                                                                                                                                                                                                          present sequence represents a human light chain CDR3 region peptide which forms part of an immunoglobulin comprising a Vkil5 segment, and the present light chain CDR3 region. The anti-CD4 antibodies may be used in therapeutic and diagnostic applications, especially for the treatment of human diseases. These antibodies reduce activity of CD4 cells and reduce undesirable autoimmune reactions, inflammatory response and transplant rejection. Transpenic animals are capable of producing heterologous antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                              Novel anti-CD4 antibody produced by transgenic mice - used in the treatment of auto-immune disease etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

The specification describes transgenic animals that are capable of producing a heterologous antibody. The antibodies are isolated form a hybridoma, comprising B cells, that is obtained from a transgenic mouse having a genome comprising a human heavy chain transgene and a human light chain transgene. The B cells are fused to immortalized cells
                                                                                                                                                                                                                                                                                                   suitable for generating a hybridoma, which produces a detectable amount of an immunoglobulin that specifically binds digoxin or Shinga-like toxin. B cells from transgenic animals can be used to apenerate hybridomas expressing monoclonal high affinity human sequence antibodies. Antibodies produced from the transgenic animals of the invention can be used to treat human diseases, e.g. autoimmune diseases, cancer, infectious disease, transplant rejection, blood disorders such as coagulation disorders and other diseases. The present sequence represents a VDJ joint of a heterologous antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Interleukin-1 type I receptor inhibitor peptide(s) and compounds - used to antagonise the activity of IL-1, for treatment of e.g. AIDS, rheumatoid arthritis, chronic hepatitis B, etc.
                                                                                                                        Novel transgenic non-human animals used to produce heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Interleukin-1 type I receptor binding peptide.
                                                                                                                                                                            Example 41; Page 307; 484pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a light chain complementarity
determining region (CDR) 3 peptide. It is part of the antibody of
the invention. The specification describes transgenic non-human
animals, especially a mouse, which are capable of producing a human
heterologous antibodies of multiple isotypes by undergoing isotype
switching. The transgenes are capable of functionally rearranging a
transgenes. The transgenes are capable of functionally rearranging a
heterologous diversity (D) gene in a variable-diversity-junction (V-D-J)
recombination. The transgenes include a heavy chain transgene comprising
at least one V D and J gene segment, and one constant region gene
segment. The immunoglobulin (Ig) light chain transgene comprises at least
one V and J gene segment and one constant region gene segment. The gene
segments are heterologous to the transgenic animal. The antibody can be
used to prevent efflux of neutrophils from vasculature. It can also be
used to treat reperfusion injury. Ob binding antibodies are used to
reduce undesirable autoimmune reactions inflammatory responses and
rejection of transplanted organs. The anti-IL-8 antibodies can reduce
tissue damage and prolong survival in animal models of acute adult
respiratory distress syndrome (ARDS) and acid induced lung injury. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present peptide represents a peptide that antagonises the action of interleukin-1 (IL-1) by binding to an IL-1 type I receptor (IL-1RtI). The peptide is used in the treatment of disorders mediated by
                                                                             The patent discloses, inter alia, new peptides of 11-40 amino acids in length which bind to the IL-1 type I receptor and which comprise the generic sequence 223-N-224-239-225-225-227-228-229-230-240, in which 223 is D or Y; 224 is D, S or T; 239 is S, T or A; 225 is S or Y; 224 is D, Q. E or V; 238 is N, S, K, H or W; 229 is F or L; 230 is D, N, S or L; and 240 is L, I, Q, M or A. These peptides may be used in the treatment of a variety of IL-1 related disorders including atherosclerosis, renumatoid arthritis, osteoporosis, HIV infection and AIDS, bacterial infection, respiratory distress syndrome, acute myelogenous leukeemia, graft versus host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disease, coal miner pneumoconiosis, alcoholic cirrhosis, cuprophane haemodialysis, cardiopulmonary bypass, chronic hepatitis B, tuberculosis, obstructive jaundice, Paget's disease and osteomalacia, IDDM, Kawasaki's disease, inflammatory bowel disease, sepsis, toxic shock and luteal phase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is a specifically claimed example of the new peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antagonisation of action of interleukin-1 on type I receptor - by \operatorname{contacting} receptor with selected peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antagonist; interleukin-1; IL-1; IL-1 type I receptor; IL-1RtI;

The invention relates to new peptides which which bind to the interleukin-1 type I receptor (IL-IRtI). These include 'lead' peptides identified using random peptide diversity generating systems (e.g. 'peptides on phage' and 'peptides on plasmids' systems) and derivatives of the 'lead' peptides which have a similar structure or shape as the lead compounds but which differ with respect to susceptibility to hydrolysis or proteolysis and/or with respect to biological properties. In particular, peptides are claimed which are 11,to 40 amino acids in length, which bind to the IL-IRtI with an IC50 standard of no more than 2.5 mM and which comprise the sequence: 223-124-225-225-227-228-229-230-240 where: 233 is Dor Y: 224 is D, Os E or V: 228 is N, S, K, H or W: 229 is F or L: 230 is D, N, S or L; and 240 is L, I, Q, M or A.
IL-1, e.g. atherosclerosis, arthritis, osteoporosis, AIDS, bacterial infections, respiratory distress syndrome, acute myelogenous leukaemia, graft-versus-host disease, pneumoconiosis, cirrhosis, cuprophane haemodialysis, cardiopulmonary bypass, hepatitis B, thermal injury, reticulohisticoytosis, sarcoidosis, tuberculosis, obstructive jaundice, Paget's disease, osteomalacia, diabetes, Kawasaki's disease, inflammatory bowel disease, sepsis, toxic shock and luteal phase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Interleukin-1 type I receptor; IL-1RtI; inflammatory bowel disease; rheumatoid arthritis; osteoarthritis; psoriasis; encephalitis; glomerulonephritis; respiratory distress syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New peptides which bind to the interleukin-1 type I receptor (IL-1RtI) - useful for the study of IL-1RtI mediated activities and the treatment/prevention of diseases with an inappropriate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

                                           useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
activities. DNAs, vectors and host cells from the present invention can
                         be used for producing pharmaceutical compositions. The compositions are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the complementarity determining region (CDR) 3 of the light chain hypervariable region of an antibody recognising the platelet activating factor (PAF) receptor. The variable region of mouse anti-PAF receptor monoclonal antibody is useful for the preparation of chimeric antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunoglobulin light chain; hypervariable region; PAF; CDR; antibody; platelet activating factor receptor; murine; chimeric; anti-PAF; complementarity determining region.
                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Polypeptide comprising variable region of antibody recognising PAF receptor - useful for the preparation of chimeric antibody

The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically biological sample isolated from product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions. Characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and
                                                                                                                  Cancer associated antigen; diagnosis; research; treatment; human; breast cancer; colon cancer; gastric cancer; renal cancer; lung cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated cancer associated nucleic acids and polypeptides - isolated using sera from cancer patients, used to develop products for the diagnosis, monitoring or treatment of cancers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic and sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, remal cancer, colon cancer, gastric cancer, prostate cancer and

The present invention relates to a set of peptide ligands consisting of specific complementary peptides to proteins encoded by genes of plant genomes. The present sequence is one such peptide from Arabidopsis thaliana. The peptides of the present invention are useful in an assay to identify a peptide, especially a peptide pesticide or herbicide. The peptides are also useful for tools for agricultural research and
                                                                                                                                                                                                                                                                                                                       A set of peptide ligands for agricultural research and development of therapeutic agents comprise specific complementary peptides to proteins encoded by genes of plant genomes .
